Description:

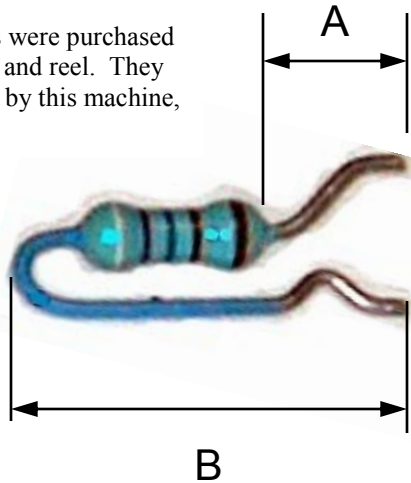

The all new "Radial Trimmer" © Model RT250, is a suburb trimming machine for components which are purchased on tape and reel but need to be cut to length for manual insertion. Using the proven frame design of our popular Roto Crank axial component former, this new radial trimmer combines a sturdy and economical design with the simplicity of a manual

crank.

Specifications

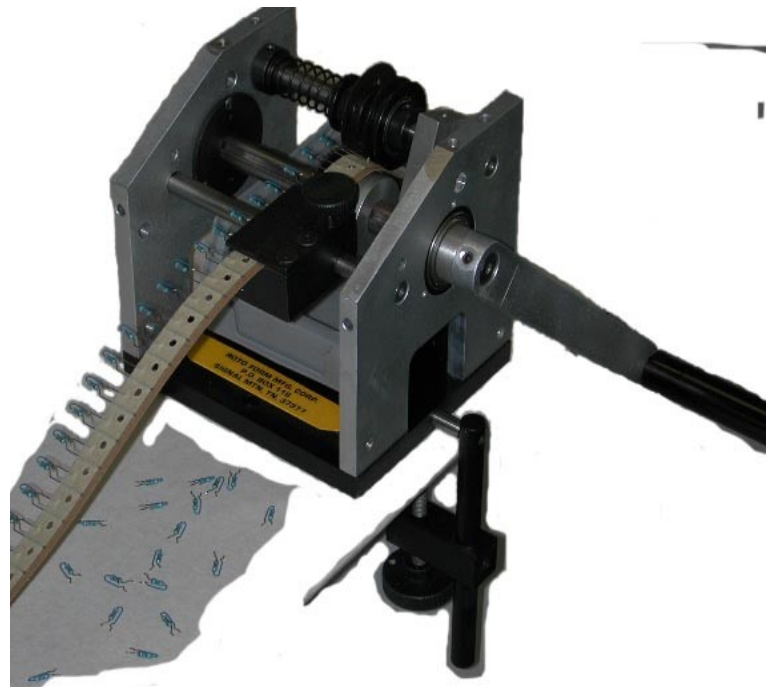

These components were purchased preformed on tape and reel. They were cut-to-length by this machine, but not formed!
